Physical Security Expert for Access Controls and Video Surveillance Systems

Description

Access Control and Video Surveillance

AT-NET Services is looking for a Physical Security Engineer with a specialty in access control and video surveillance to implement, maintain, and support our growing client base's technology infrastructures. You will be part of a systems engineering team that is responsible for designing, installing, and maintaining physical infrastructure and security at our client's offices, warehouses, and production facilities.

The Security Expert Job candidate reports to the I&S Project Manager and does the installation, configuration, and maintenance of networked information systems. Responsibilities also include staying current with different products from a broad spectrum of fields including A.V., Telecom, I.T., Fire Alarms and Security. This position may include running projects in SC, GA, AL, and TN and will be required to travel as needed to these sites. See our Camera and Video CCTV Systems page for more information.

Responsibilities

Additional job responsibilities include:

- Provide weekly, monthly and project reports as needed
- Keep all online documentation current and highly organized
- Pulling cable
- Mounting TVs and Cameras
- Installing and testing door access controls
- Drive engineering design quality and execution
- Plans and supports network and computing infrastructure
- Program and assign IP addresses for IP Cameras, Network Video Recorders, Access Control Boards, and other IP Devices.
- Be able to travel and work On Site and Remote
- Being able to document and create installation drawings as well as built documents for system Configurations.
- Able to work with a team and independent.
- Able to offer remote support to field installers
- Collect the information they need to address challenges and decide on the best course of action as a project progresses.
- Have design knowledge of systems for support in trouble shooting.
- Flexibility with design build projects and customer needs.
- Able to read and understand Network and Construction Drawings.
- Setup PCs with new software for applications, firmware updates and assembly.
- Effective Communications Skills.
- Work closely with other Engineers, Project Managers, Field Technicians and Customers.
- Work with Manufactures for design assistance, Bill of Materials, and Integration.
