

Secure Access and Smooth Operations With AT-NET's Door Access Solution

Overview

A regional aluminum manufacturer needed a modern way to manage building entry. With staff moving in and out throughout the day, traditional locks and inconsistent access systems were causing delays and unnecessary support issues. The company wanted a solution that improved security while making daily access easier for employees.

AT-NET provided a tailored installation of a new access control system, delivering immediate improvements in both efficiency and peace of mind.

The Challenge

The front entry and other high-traffic doors were creating bottlenecks for employees. Lost key cards, recurring access errors, and limited visibility into who was entering the building put unnecessary strain on staff and IT resources. The company needed a **cost-effective and reliable access control solution** that could scale across the facility.

The Solution

Referred by another customer and confirmed through online research, the client chose AT-NET for its proximity, pricing, and reputation for customer care.

AT-NET assigned a team of 2–5 technicians to handle the installation, beginning with the front foyer door. The project included:

- Installing new door access hardware for secure entry
- Configuring the system to support smooth employee access
- Rolling out additional door installations across the facility
- Providing clear instructions and responsive support during setup

Managed Technology Solutions With A Focus On CyberSecurity

AT-NET Services *They didn't just install the system and walk away — they really took the time to understand how we wanted it to work for our team and tailored it to fit.”*

— Network Systems Engineer

The Results

The new system delivered immediate results. Employees experienced smoother access, support tickets dropped noticeably, and management gained visibility into entry logs.

Key Outcomes

- Reduced access card issues
- Faster, more reliable entry for staff
- Better oversight of building access
- Fewer door-related IT support tickets

“We could see the results right away — smoother access, fewer issues, and less time wasted.”

— Network Systems Engineer

Looking Ahead

The company continues to work with AT-NET to expand the access system across its facility. With improved security and efficiency already in place, leadership is confident the solution will scale to meet future needs.

“We are really impressed with how easy AT-NET is to work with. They kept us on schedule and made the process stress-free.”

— Network Systems Engineer
